

DOSACOL

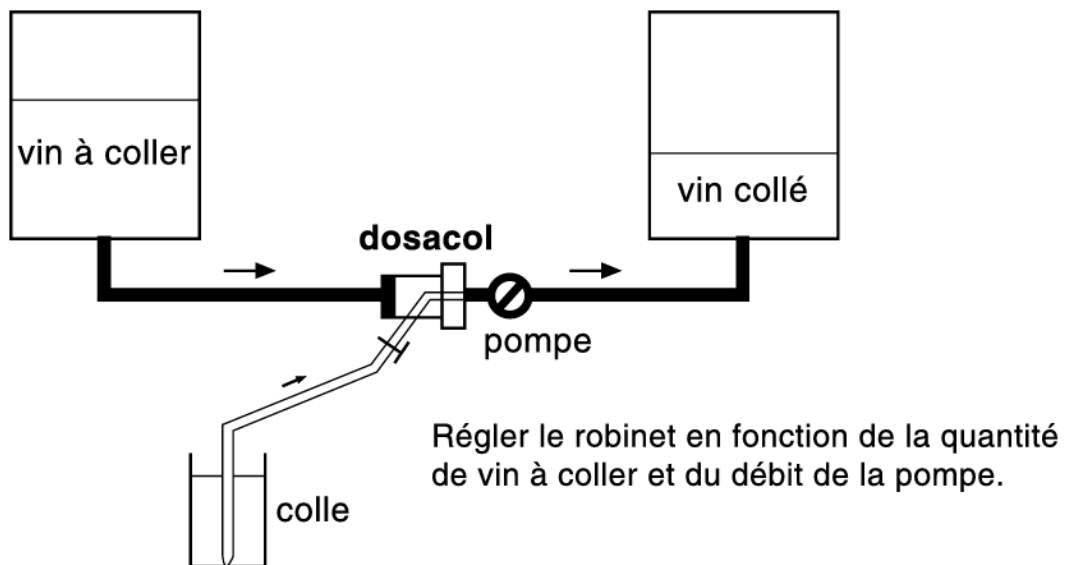

Fining connection

CHARACTERISTICS

- ◆ **DOSACOL** is a plug and socket connection 316 stainless with a quarter turn tap for adjustment. It exists in 40 mm and 50 mm diameters (“pas de Macon”).
 - ◆ It is connected on the suction side of the pump. A depression is created into the **DOSACOL**, which permits the regular injection of all types of solutions (fining agent, additives etc ...).
- The injection debit depends on the depression created by the pump and on the fluidity of the solution to be added.

ADVANTAGES

- ◆ Perfect homogenisation between the fining agent and the wine :
 - best efficiency of fining,
 - rapid precipitation of the fining agent,
 - diminution of fining agent dosages.
- ◆ No aeration of the wine into the bucket :
 - diminution of SO₂ dosages to re-add,
 - organoleptic qualities of respected wine.
- ◆ Permits the fining of wine during pumping-over from truck to tanks.
- ◆ Permits to inject all the other oenological products by the same way. Concerning the fining agent, it is necessary that they coagulate quickly with ions or wine acidity to casein, bentonite, alginate, gelatine and all the complex containing base compounds.
